

Simple, Quick, Effective.

The EZP1T Precleaner is not your average solid-blade belt cleaner that mounts on the head pulley. It features a unique uni-blade design that combines simple, do-it-yourself installation, quick maintenance, and effective cleaning results with a price tag that you can afford.

Features and Benefits

- **Works with Flexco mechanical splices.** The torsion tensioner allows the blade to quickly move away from the belt when a splice passes. The polyurethane blade material easily glides over the splice without damage and with minimal cleaning disruption.
- **Compact, streamlined design.** The EZP1T Precleaner requires only 100mm (4") of horizontal clearance for correct installation. Its streamlined contours prevent material buildup on the blade or the pole.
- **Can be used on reversing belts.** Installing cleaners on both pulleys gives superior cleaning results on belts that run in both directions.
- **Fits most conveyor structures.** Available for belt widths from 300-1800mm (12" - 72").
- **Blade can be used on other cleaners.** The ConShear™ blade can be used as a replacement blade on many OEM cleaners.

ELIMINATOR[®] Chevron Belt Cleaner

A Better Cleaning Solution

Chevron, cleated and raised rib belts present a special problem for efficient cleaning. However, not cleaning these belts lets the carryback move along the return belt and cause all the familiar problems: mistracking, buildup and premature wear on idler rollers and resulting belt wear and damage. Flexco's Chevron Belt Cleaner takes a new approach to cleaning these problem belts. Hundreds of rubber fingers create a rotary cleaning action that easily flicks carryback off the belt. And without the typical clogging and rapid wear problems associated with brush-type cleaners. Now there is a better solution for wet sand belts, wood chip belts and other raised top or grooved belts.

50 mm (2 inch) rubber fingers gently dislodge carryback from chevron or raised rib belts.

Seamless molded ring means no risk of delaminating or adhesion failure.

The Secret is in the Fingers

Hundreds of wiggling, flicking 50 mm (2 inch) fingers are constantly attacking the carryback on the belt while easily stepping over the chevrons or cleats. The fingers are gently tensioned to the belt so there is no danger of abrasive wear or damage to the belt, raised ribs, or to the cleaner fingers. And the fingers are molded from an SBR rubber that offers extended abrasion resistance for long service life. A special molded ring ensures that fingers do not fall off the drum. Each finger is part of a 63 mm (2-1/2 inch) ring that is stretched to snugly fit onto the drum. So there is no vulcanized seam to delaminate or adhesion failure from glue. And each ring is keyed to nest securely to the ring next to it. The result is a trouble-free cleaner that requires minimal maintenance.

Benefits for Your Beltline

- Free-rotating. Works only when the belt runs.
- Self-cleaning. Finger length, spacing, and the rotary action allows the carryback to fall free instead of clogging.
- Long-wearing SBR rubber. Drum life ranges from 1 to 3 years depending upon the application conditions and the material being conveyed.
- Easy to install. Few parts and easy-to-use installation instructions make the job simple.
- Quick drum replacement. Simply loosen the set screws, slide off the old drum, slide on the new one and retighten the screws.
- Works on mechanically spliced or vulcanized belts.
- Works on reversing belts.

Rubber fingers create a rotary cleaning action that easily flicks carryback off the belt.

Easy to Use.

Installation is simple and quick. Pick a location on the conveyor where the belt is as flat as possible. The flatter the belt the better the cleaning efficiency. Here are some location recommendations:

at the point where the belt leaves the head pulley

under a hold-down roller

Correct Tension

Lightly tension the fingers to the belt so they compress about 6 mm (1/4 inch).

Cleaning Performance

Cleanability range: 50% to 70%. For additional cleaning efficiency add a second cleaner on the belt.

Compare the Options:

Flexco Chevron Cleaner

- + Self-cleaning fingers.
- + Rubber fingers are gentle on belt's top cover.
- + Passive - moves only when the belt is running.
- + Finger wear life is 1 to 3 years.
- + Drum change is quick and easy.

Specifications	
Belt Speed	Up to 2.5 M/sec (500 fpm)
Vertical and Horizontal Clearance	250 mm (10")
Temperature Range	-35°C to 82°C (-30°F to 180°F)
Maximum Chevron or Cleat Height	25 mm (1")
Finger Length	50 mm (2")
Rubber Durometer	45A
Overall Diameter	238 mm (9-1/2")
Shaft Length	Belt Width plus 750 mm (30")
Shaft Diameter	20 mm (1-3/16")

Typical Brush Cleaner

- Clogs with material, especially when wet.
- Some bristle materials or a clogged brush can cause excessive wear on the belt.
- Motor powered - requires maintenance and repairs.
- Bristles wear quickly and require frequent change-out.
- Independent bristle strips must be removed and new ones rethreaded in.

High Cleaning Efficient Primary Cleaner

The H-Type[®] conveyor belt cleaner from Flexco is designed to be positioned on the head pulley and to remove the bulk of the carryback from the belt. Proven performance for over 20 years as the most efficient primary cleaner in material handling applications such as coal, iron ore, bauxite, and hard rock mining.

Optimally Positioned on the Head Pulley

Blade contact on the pulley is 15° below the horizontal centerline. This keeps the blades out of the discharge path and protects them from rocks, large lumps, and other debris.

H-Type[®] Belt Cleaner with V-Tips

V-Tips should ONLY be used on vulcanised belts. Suspension arm size is determined by head pulley diameter (over lagging and belt). See chart on front page.

H-Type[®] Belt Cleaner with XF2-Tips

XF2 Tips are recommended for mechanically spliced belts but are also suitable for vulcanised belts. XF2 Tip size is determined by head pulley diameter (see chart on front page). Spring Tensioners are standard on HXF cleaners.

Segmented Cushions

Independently tensioned 200 mm segmented cushions allow each blade to self-adjust to the conveyor belt as it wears ensuring continuous blade-to-belt contact.

Available in Two Blade Options

High Grade Tungsten Carbide: allows for maximum cleaning efficiency and superior wear characteristics on vulcanized belts. Also available with protected tips for abrasive applications.

Long Wearing Polyurethane: for use in mechanically spliced applications. Also available in FRAS for underground coal applications.

Other Features and Benefits

- Works on Reversing Belts
- Available in Powder Coated or Stainless Steel. Contact Flexco for SS options
- 450 to 1200 mm poles, Schedule 80, 60 mm diameter
- 1400 to 1600 mm, Schedule 40, 73 mm diameter
- Heavy-Duty 1800 mm and above poles, Schedule 40, 73 mm diameter, complete with stiffening brace and gusseted cushion plate

Big Features in a Small Package

Many conveyors and portables have tight space configurations. That means a belt cleaner must be small and compact to fit. The new Rockline® E-ZP-LS Precleaner delivers a big cleaning job in a compact cleaner. With a 113 mm (4-1/2") high blade and needing just 75 mm (3") of horizontal and 165 mm (6-1/2") of vertical clearance, this precleaner fits on conveyors with pulleys as small as 150 mm (6").

The E-ZP-LS is compact, but still includes the user-friendly and performance features of the industry-preferred Rockline E-ZP1 Precleaner. The patented, faceted ConShear™-LS Blade allows the blade to renew its cleaning edge as it wears. The smaller-sized LST Tensioner is self-contained and simple to adjust; and the cleaner is easy to service with the one-pin blade replacement feature.

The E-ZP-LS is easy to install correctly and delivers an excellent cleaning job in tight spaces.

Simple, Accurate Installation

Correct cleaner installation is a key factor in the cleaner's performance and wear life. If the cleaner pole is not optimally located, an incorrect blade attack angle to the belt can cause quick-wear problems or actually allow the blade to flip through, causing damage to the pole.

That's why the E-ZP-LS Precleaner has specific installation coordinates for each size and step-by-step instructions. A marking template and pole location gauge are included to easily lay out the pole location and to double-check the finished install. Correct pole location insures the blade hits the "sweet spot" attack angle to the belt to provide optimal cleaning, compatibility with mechanical splices, and a long wear life.

Our Material Path Option™

Flexco pioneered the Material Path Option™ to reduce the differential blade wear in the center of a urethane blade. This "smile effect" wear pattern quickly reduces cleaning performance, causes short blade life and other problems as the blade is retensioned. The Flexco solution allows the user to select the blade size that covers the belt's material path only. The E-ZP-LS Precleaner can be ordered with a blade that is belt width minus 50 mm (2") or belt width minus 200 mm (8"). For conveyors with smaller material paths each cleaner pole has a third set of holes to accommodate a belt width minus 350 mm (14") blade. Simply select the right blade width for your conveyor.
